

“Applying Skill Acquisition in Sport Workshop”

This practical workshop is designed to be an interactive content creation piece developed by attendees present at the Motor Skills Conference, Kisakallio. Knowledge from the workshop will be collated and shared as a resource for the attendees to engage in following the conference. Aligned with the “Kisakallio Experience” the intention of the workshop is to help attendees interact, exchange existing resources that they regarded as valuable, and identify questions that they would like help answering in their own practice. The topics covered are centred around the conference themes such as Ecological Dynamics, Non-Linear Pedagogy, Designing and Building Skill Training Environments, and more.

Those participating in the session will form small groups of 5-6 people that will rotate in a round robin fashion through each topic, spending 5 minutes at each theme where they will be asked to 1. Provide advice/insights they could share, 2. Identify what they would like to know more about in relation to each topic, and 3. Share resources they have found helpful for each topic
